SUMMARY

I am a motivated and curious 3rd-year Computer Science Engineering student with a keen interest in machine learning, automation, data science, and problem-solving. Proficient in Python programming, RDBMSs, and Scrapping using requests, I possess the necessary technical skills to excel in these domains.

PROJECTS

House price prediction| (Using Python and Flask)

- In this project, I developed the predictive model trained on house price data. It deploys with flask API and uses Linear Regression to predict the price value. Deploy Machine Learning Model Using Flask to take a model from python code.
- The AIM of this project usage is only the usage of API and flask usage not the Machine learning model with higher accuracy.

Bank Customer Churn Prediction | (Using pandas,numpy and sklearn modules)

- This project is focused on predicting bank customer churn using machine learning algorithms. The aim of this project is to predict if a customer is likely to leave the bank or not, based on various features provided in the dataset.
- The dataset was preprocessed and various machine learning algorithms were applied to it. SVM and Naive Bayes algorithms were the best performers, achieving a high accuracy.

Machine learning Automation | (Using Auto ML and lazy Predict modules)

- This project is focused mainly on automating the general tasks of data preprocessing and accuracy prediction using machine learning module lazypredict.
- Deployed the project in Azure using Github actions and productionised the code.
- This project involves github pages as well to host the pages on it along with Flask implementation which can read different file formats.

SKILLS

- RDBMS, MySQL
- Python for Data Science, Flask
- Statistics
- Basics of HTML, CSS
- EDA and Machine learning
- Git & Github
- Deep Learning(Learning)
- Azure Machine learning(basics)
- Problem Solving

EDUCATION

Jain University | Bengaluru *Oct 2020 - present*

- Bachelor of Technologies CSE (Data Science) - CGPA 8.656

FIITJEE Junior College | Hyderabad *June2018-July2020*

- Class 12 MPC - Marks 9.89/10

ACHIEVMENTS

- President of ANOVA Datascience Student club in JAIN UNIVERSITY for 10 months.
- Part of Google Developer Student club as a Data Science Facilitator for 11 months.
- Golden Badges in Problem solving, MySQL, Python in hackerrank platform
- Solved over 175+ questions in Leetcode.
- Secured 3 bronze medals in Kaggle as a Discussion contributor.
- Secured 6th individual position out of 159 participants in MACHINE HACK hackathon with an accuracy of 92.666%
- NPTEL Python for Data Science Certification from IIT Madras.
- Successfully hosted 2 hackathons in ANOVA and 1 workshop in GDSC at JAIN UNIVERSITY
